

PROFESSIONAL SUMMARY:

- Over all 4+ years of strong experience as Full Stack web developer with solid understanding of front - end technologies, MVC frameworks, Restful web services and Data Base designing. .
- Expertise in using **React.js/Redux** to build User Interface, strong knowledge of **state store**,
- Expertise in using Grid Controls, jQuery and DOM manipulations, worked with CSS.
- Extensive experience in developing Restful web services with **Express** and **NodeJS**.
- Knowledge of **Php myadmin** as well as SQL server, experienced with and write SQL queries, stored procedures and data base normalizations.
- Understanding with advanced JavaScript concepts, such as Prototype, Closure, Scope Chain and Promise.
- Having good experience on Responsive frameworks Bootstrap, Material UI
- Hands-on experience in React JS
- Working with AWS tools EC2, API Gateway, S3
- Expertise in Cross-browser HTML, CSS, and JavaScript coding to offer responsive website layouts to modern browsers and mobile devices
- Experience on using the tools JIRA, GIT, Bit-bucket
- Hands-on experience in consuming Web APIs
- Worked on e-commerce and Job management Portal
- Highly motivated and adaptive with the ability to grasp things quickly
- Good at collaborating with team members to achieve project goals
- Adept at all phases of the project life cycle, including requirements gathering, developing UI, testing, and implementation

TECHNICAL SKILLS

Web Technologies	Html, Html5, CSS, CSS3, Tailwind CSS, Bootstrap, JavaScript, jQuery, JSON, AJAX, React Js, React hooks, Redux, Wrodpress, AWS, Canva, Figma,
IDE's	Visual Studio Code, Net beans
Application servers and scripting	NodeJS (Node server), PHP(Apache) ,
Database	MYSQL,XAMPP, Phpmyadmin
Operating Systems	All Windows versions, Mac OS, Unix and Linux.
Version Controls	Git ,AWS, Google APIs, Rest APIs

WORK EXPERIENCE

Working as frontend developer in Mindmax from Aug-2022 to Present

PROJECTS DETAILS

#1 Bamboovintage(CRM tool)

Project description:

In my my Project I have two portal the CRM or Members' portal provides all necessary information to a platform's clients on what is happening to their account after they register for one with a platform.

The Admin CRM is for platform backend users in their day-to-day administration of the business. In this CRM, details of all client users are presented to the Admin Users, who have the access to approve or reject permissions requested by the client users.

Responsibilities:

- Analysed requirement specifications.
- Worked Laravel to develop web pages.
- Involved in client meetings for requirement discussion based on sprints and daily scrum meetings.
- Interact with the designer to suggest changes and to make sure the view he has about the design is translated into actual

functionality

- Lead a front end developers, giving support to the client's multi-cultural team, providing feedback, clarifying requirements and helping with technical questions.
- In live tools, we used to receive many queries and requests for changes, so we provided support to the client.

Environment: PHP, jQuery, Laravel, XAMPP

Working as frontend developer in Wipro from june-2019 to Aug-2022.

Project # 1:

Title NRI Portal

Role Front-end Developer

Technologies used React JS, React hooks, Redux, Redux Saga, AWS GraphQL, Lambda, Microservices

Project Description:

A solution to fulfill the Legal, Taxation needs of NRI's through the "NRI services" application, including e-commerce platform, as an NRI consumer need to choose the service as per their requirements, add to cart, check out and completing payment, as a result he/she will get a check list to submit the details based on the service consumer selected, SME will initiate the service to the respective LOB executives to complete the on behalf of consumer after the consumer submit. The checklist will be passed through various stages as per the workflow designed. Consumer can chat with executive during the process if any queries. Role management will help admin team to manage users and respective roles to assign and reassign tasks

Responsibilities:

- Development of the components using React JS
- Writing application interface codes using JavaScript following React.js workflows
- Integrating Lambda with the help of Graph QL query/mutation.
- Created the user authentication with JWT token process.
- Use state management libraries such as Redux to manage application state.
- Integrating Graph QL in front end application
- Co-coordinating the development and QA validation
- Responsible of client calls from the front end development perspective.

Project# 2

Title Vrishkar Cleaning Portal

Role Software Developer

Technologies used React Js, HTML5, CSS3, Figma, Bit Bucket, Express js, AWS Services etc

Project Description:

Vrishkar Cleaning Portal provides various cleaning services such as house cleaning, car washing, etc. It is a US-based project. As a full-stack developer working on the Vrishkar Cleaning Portal, I am using technologies such as React.js, Express.js, AWS (Cognito, Lambda, API Gateway), and PG Admin for project development

- **Responsibilities:**
- Design and implement new features and functionality for the cleaning portal project using React.js.
- Write server-side code using Express.js and connect to the PostgreSQL database using Sequelize Design.
- Implement use Restful APIs using Aws Service to interact with the front-end and back-end of the application.
- Deploy the application using services such as Docker, aws Amplify.
- Implement lambda functions and API Gateway api In Express js
- Develop and maintain the PostgreSQL database schema and optimize queries for performance.
- Debug and troubleshoot issues as they arise, and implement solutions to fix them.

- Use tools such as Postman or similar to test APIs and troubleshoot issues.
- Use Bit bucket or similar version control tools to manage code changes and collaborate with other developers.
- Participate in code reviews to ensure code quality and consistency.
- Attend meetings and communicate progress and issues with the team.
- Use Jira development methodologies to manage tasks.
- Continuously learn and improve skills and knowledge in full-stack development and related technologies.

Project# 3

Title Vibrant Living E-commerce

Role Front-end Developer

Technologies used React JS, Bootstrap, HTML, JavaScript, CSS.

Project Description:

This application mainly aims on online food ordering and delivery platform by themselves and their dependents by building application portal for admin and as well as consumers

Responsibilities:

- Integrated Cognito Authentication flow for the entire application.
- Understand the requirements and proposing design of various modules.
- Designed user interface for the product using CSS3, HTML5 and Java script.
- Analyzed business requirements and existing software for High Level Design.
- Produced client-side validation through JavaScript and Ajax for asynchronous communication.
- Involved in development of front-end components using bootstrap, JavaScript, and JSON.
- Attended daily Scrum meetings, kept up to date on best practices for JavaScript frameworks and techniques.

Project# 4 :

Title Notata

Role Front-end Developer

Technologies used React Js, HTML5, CSS3, GitHub, etc.

Project Description :

Notata provides a finance and investment platform for the startup investors to evaluate and share deals. It helps investors perform consistent evaluation and engage their networks. Users can create investment groups, share deal flow or collect opinions from external experts. Here we have used ReactJs, Sass and material UI for building the classical user interface and Redux for managing the data on client side at global scope.

Responsibilities:

Gathered the information from project architecture and design team.

- Translating the Figma designs into the React components.
- Involved in the new feature development and implementation.
- Collaborated with AI and back-end engineers for client-side implementations
- Worked closely with client for newly implemented features review.

- Participated in weekly calls with clients, to understand and analyze the required changes.
- Analyse all the requirements, identify the affected area and implement the changes.
- Add new enhancements to the application according to the requirements given.
- Improved the performance and user interface in existing modules

Responsibilities:

- Worked with HTML, CSS. HTML5, CSS3, JSP, JSON, JavaScript, React Js, jQuery for developing user interface.
- Building reusable components and front-end libraries.
- Determining the structure and design of web pages.
- Translating designs and wireframes into high quality code
- Optimizing components for maximum performance across a vast array of web capable devices and browsers.
- Involved in code review.
- Tested and corrected bugs in their functioning.
- Created services based on requirement.
- Good knowledge of debugging JavaScript and html code with Firefox Firebug and Google chrome JavaScript debugger

Environment: HTML 4/5, CSS 2/3, JavaScript, jQuery, AJAX, JSON, XML, and React js, Redux.

EDUCATION:

Completed My Bsc in the stream of Computer Science with 64% In Krishna University Andhra Pradesh.

Declaration:

I hereby declare that the above written particulars are true to the best of my knowledge and belief.
